

SALT

Salt Sustainable Income Fund Fact Sheet – November 2024

Manager Profile

Salt Funds Management is a boutique investment management firm wholly owned by its employees which specialises in actively seeking to maximise returns while managing the risks of the investment. Salt examines investments for their environmental and social impact as well as the quality of their governance.

Investment Strategy

The Fund aims to provide a gross fixed quarterly income (after fees and expenses but before tax) in excess of bank deposit rates, along with a positive return on capital on a rolling three-year basis. Deposit rates are proxied by the NZ Bank Bill Index.

A Reference Portfolio is provided, medium-term outperformance of which is a secondary objective, consisting of the weighted sum of components.

The Fund targets a diversified mix of growth and defensive assets, with a focus on securities with Environmental, Social and Governance features & reliable income generation. The Fund's strategy is to invest in a quality asset mix to provide regular, sustainable income and a positive return on capital. The value of the fund will fluctuate in line with listed market developments, but the primary focus is enhanced income and thus, shorter-term variability is an expected feature. Income is prioritized above capital gain in the fund, nevertheless, the allocation to both growth and yielding assets allows for both objectives to operate over the medium- and longer-term horizons.

Fund Facts at 30 November 2024

Benchmark	Bank deposit rates (BNZBIL Index)
Reference portfolio	SAA-weighted component benchmark indices' performance
Fund Assets	\$48.51 million
Inception Date	19 June 2021
Portfolio Manager	Greg Fleming
Prospective distribution yield (cents per unit) / based on Unit Price of 2.12.24	1.125 cents per unit per Quarter / 4.97% per annum

Unit Price at 30 November 2024

Application	0.9083
Redemption	0.9046

Sustainability Metrics

Fund ESG Scores	Portfolio	Category ave
Morningstar ESG score	19.06	21.00

Scores indicate risk level – a lower score reflects a lower ESG multi-factor risk level. ESG score as at 30.11.24. Sustainability provides issuer-level ESG Risk analysis used in the calculation of Morningstar's Sustainability Score. Sustainable Investment Mandate information is derived from the fund prospectus.

Market Commentary

- Markets were dominated in November by the Republican clean sweep of US elections. This had markets contemplating a more expansionary US fiscal policy and a more nationalist trade policy. US equities gained +6.3%, contributing to a 4.6% rise in developed market equities.
- Bond markets were less enamoured with the potential inflationary implications, with the global aggregate bond index, returning +0.3%.
- Solid economic data also contributed to positive equity markets, feeding the theme of US exceptionalism. The US Federal Reserve cut by 25bp, citing further progress on disinflation.
- In Europe, the ECB is contending with weak economic fundamentals, while inflation is proving resilient. Political uncertainty in Germany and France also impacted markets.
- In Japan, expectations of another interest rate hike are building, with a further 25bp increase possible before Christmas although a January hike is more likely.
- In China, highly anticipated fiscal stimulus disappointed the market. While a debt swap arrangement for local governments was welcome, a lack of meaningful stimulus aimed at boosting consumption was well short of expectations.
- The RBA maintained its hawkish bias in November, stating it needs to remain vigilant to upside risks to inflation. The tight labour market saw the unemployment rate remain at 4.1%.
- In NZ, weak labour market data saw the unemployment rate rise to 4.8%, with a decline in the participation rate preventing a sharper rise. Activity data remained weak, though increasing signs of a bottoming out of recent declines are starting to emerge. The RBNZ cut the OCR by 50bp to 4.25%.

Salt Sustainable Income Fund Commentary

The Sustainable Income Fund gained in November month, with a return of +1.65% (before fees / tax) in the month, which took its three-month gain to +2.80% and its one-year return to 15.28% (before fees / tax.) The month's return was positively impacted by gains in NZ domestic equities, although Australasian property weakened slightly. Markets continue to focus on lower inflation permitting central bank interest rate reductions. Data affecting central banks' easing timing has influenced the listed Real Asset and Bond returns within the portfolio. However, a more pronounced easing path from the RBNZ can assist NZ equity assets and allow additional catch-up with global asset returns. Diversification of income sources remains effective.

As inflation progressively confirms a definitive down-shift, we expect component asset classes to improve further, as more global central banks advance their interest rate easings. Volatility across markets is ever-present but sentiment is much less fragile. We expect value recoveries in interest-rate sensitive assets to continue through Q4 2024 and into 2025.

November saw NZ domestic equities recording further positive returns, The NZ Dividend Appreciation Fund was the strongest component in November, contributing +0.93%. The Enhanced Property Fund by contrast detracted -0.2%. The Salt Sustainable Global Infrastructure Fund contributed +0.51% as did the Sustainable Global Property Fund (+0.08%). The Global Fixed Interest Opportunities Fund made a moderate monthly contribution of +0.25% as bond interest rates were volatile in the USA.

Salt Sustainable Income Fund outlook

Central bank rate cuts are continuing to broaden this year and next, with the Federal Reserve and Bank of England both cutting by -0.25% in early November. We believe bond yields adjusted sufficiently (via a volatile and uncertain route in the last 24 months) for us to have instituted a neutral bond positioning within the Sustainable Income Fund. We consider inflation risk now poses a much-reduced danger to the capital valuations of bond portfolios. The allocation to bonds is now at the neutral 35% SAA weight. Due to fiscal risks, particularly surrounding the policies of the incoming Trump administration, we would move overweight only incrementally. Recent economic data in the US is less dovish for inflation.

The NZ economy is still straining under mild recessionary forces. The Reserve Bank of New Zealand was "on hold" until August with the Official Cash Rate, so domestic yields and discount rates were until recently fairly elevated. Now that the domestic easing cycle is well underway, there is scope for improved NZ returns, especially next year, and the latest RBNZ Official Cash Rate Review confirmed more policy rate reduction path ahead. However, the next RBNZ meeting is taking place on 19 February.

Diversified Income Funds containing an allocation to domestic equities generally experienced limited capital value gains in early 2024, but that has now improved. Income yields remain attractive by historical standards.

NZ equities had a very good Third quarter and carried some upward momentum into October and November, but better economic activity in 2025 is needed to lift corporate earnings and justify the re-pricing seen.

We anticipate the longer-term capital growth strategies within the Sustainable Income Fund will boost performance, as inflation conditions are improving. However, there is still a mildly recessionary period to traverse en route to that outcome in New Zealand. Hence, the sourcing of Fund income from a globally-diversified set of yielding securities.

The phase of meaningful interest rate reductions from central banks is however well underway, and when economies respond with asset revaluations, we expect more beneficial capital growth impacts. This positive portfolio role will likely be a key feature of total returns into 2025.

As the primary objective of the Salt Sustainable Income Fund is to invest in quality sustainable yield payers, minimizing short-term capital price fluctuation is secondary. Market volatility allows us to acquire high quality and defensible dividend-paying assets for the Fund at better prices.

Distribution of 1.125 cents per unit / quarter retained

Higher component asset yields enabled us to retain the quarterly cents-per-unit distribution from the fund, at 1.125 cpu, for the latest quarterly distribution which was paid out / reinvested in November.

The silver lining in the bond market's repricing is that the yield received from bond investments shifted into a higher range and that supports the Sustainable Income Fund's forward distribution path. This is characteristic of a transition into a mid-level interest rate regime which may endure for years, rather than months, ahead.

Internationally, major central banks are now communicating the phase of interest rate adjustments, sufficient to anchor inflation expectations, has been successful. Recently, the balance of evidence has been on the better side globally, particularly suggesting that the US Federal Reserve is well on track to deliver an economic "soft landing." Rate reductions have followed and should progress incrementally into 2025.

While the data-driven market volatility at times requires fortitude from investors, the objective of securing an inflation-resilient income level means that equity market fluctuations and corrections over short periods are inevitable. Over the medium-term, moderate capital gains in addition to income advantages are expected, and the Sustainable Income Fund is positioned to harvest them.

It is crucial to note that the Income level from equity dividends and bond coupons received into the fund has been commensurately stable through periods of market turbulence. This trend exemplifies the incremental return of some "risk premia" into certain asset classes, which had previously been unappetizing compared with risk-free assets. However, global credit spreads are now very narrow, limiting potential revaluation upside from both Investment Grade and lower rated bonds.

The fund's modelled income received from coupons and dividends is still above its prospective distribution yield. We regard this as prudent, in a still-uncertain environment.

The Real Asset components of Infrastructure and Property are well-suited to the immediate period ahead, as central bank policy rates progressively fall. Defensive merit should continue to be asserted in coming months through renewed demand for these specific "Real Asset" equity types, along with the sustainable dividend-payers in the broader Australasian market.

Finally, the lowering of the NZ Official Cash Rate has substantially reduced the Term Deposit rates offered by domestic banks, and we anticipate the downtrend in the indicative benchmark of the NZ Bank Bill rate and the 6-month Term Deposit rates to persist throughout 2026.
